CHINA'S NATIONAL
TREASURE

Ambassador for WWF

Brown Bear

03

● **Brown bear**棕熊

Diverse habitats: including forests, tundra, mountains, and coastal regions

Appearance: Its robust body is covered in thick, dense fur that ranges in color from light brown to nearly black, often with a lighter-colored patch on the chest.

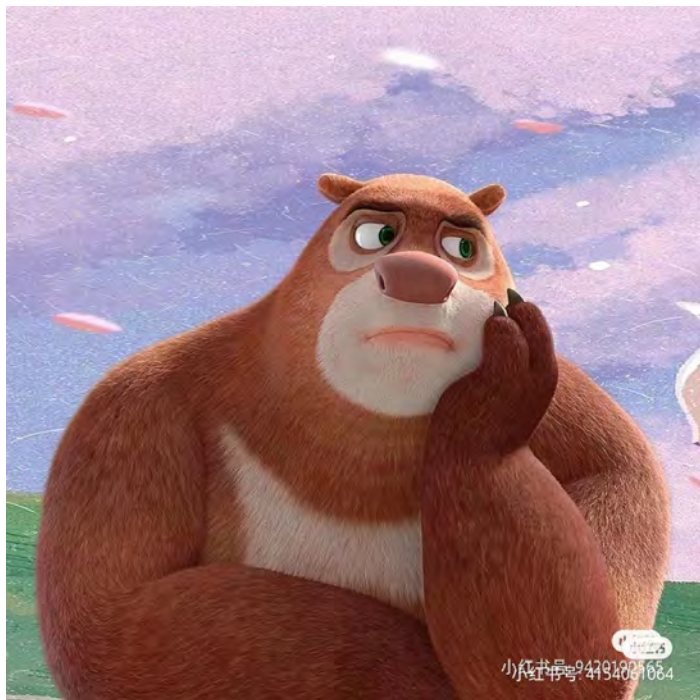

● **Brown bear**棕熊

Omnivore: It feeds on berries, nuts, roots, insects, fish, and even larger animals like deer or moose.

Speed : They are capable of running at speeds of up to 56 kilometers per hour.

● Boonie Bears 熊出没

熊大

Boonie Bears is a Chinese famous animated series.

They are brown bears. They live in northeast China.

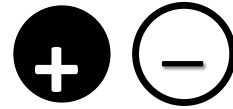

熊二

● Boonie Bears 熊出没

Malay Bear

04

I [Distribution Area]: It is mainly distributed in Southeast Asia and South Asia.

I It currently exists in Yunnan, Tibet, India, Cambodia, Laos, Malaysia, Myanmar, Thailand and Vietnam.

I [eating habits]: omnivorous, the main food is insects, honey and fruits. I like to lick honey with my tongue.

I [Survival Habits]: It mainly lives in the South Subtropical Rainforest and Evergreen Broad-leaved Forest.

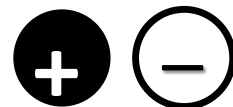

Malay bears have long tongues, up to more than 30 centimeters, which is easy to swallow termites or other insects. Bees, honey and hive are their main food sources.

As the smallest of bears, Malay bears have a long tongue that is not in harmony with their size. They don't know how to stretch out. Their body length is generally between 110 cm and 150 cm, but their tongue can be as long as 30 cm.

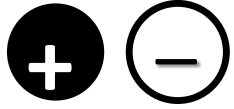

Polar Bear
